

## Zombie Outbreak Response Team

As you know, Canada is in the midst of a zombie apocalypse. Zombies attacks are ongoing in all Canadian regions, and are especially common in urban centres, such as cities and towns. As the survivors and disaster mitigation experts in your region, we need your elite team to put a plan in place to help your region survive the apocalypse and, one day, rebuild this country.

Your team must develop 3 crucial geography skill sets. You will need to determine who will become the expert in each area. The geographers needed are:

1. The Physical Geographer:

- a. Your role will be to identify the physical features of your area - the land formations, the water systems, evidence of glaciers, the climate and weather systems.

2. The Human Geographer:

- a. Your role will be to study the people who lived in your regions prior to the zombie outbreak- the kind of communities, cultures, jobs, populations, health and recreation they had, and identify priorities as you rebuild your region

3. The Regional Geographer:

- a. Your role will include finding and supplying the immediate needs of the survivors; food, clothing, shelter. You will need to identify food sources (such as farming, fishing and hunting) and other resources needed to sustain life.

Together you will determine how you will record your progress by using geography tools, including tables, flow charts and by becoming cartographers who make the maps of your region.
